

VostroNet

VostroNet provides high-speed internet to residential buildings and other multi-dwelling sites. We are an end-to-end provider, operating a software-defined network through our Q2 Software Platform™

Key Features

Seamless connection

FTTP internet with our own dedicated 10 Gbps fibre to the building.

Support for all users

24/7 monitoring and technical support with a dedicated round-the-clock escalation manager.

Better Installation Staging

We have simplified the installation process; rapid connectivity whilst ensuring no intrusion upon the activities of management and residents.

Quality

Quality high-speed and 5G ready infrastructure using the latest technology, adding value to your brand.

The VostroNet Difference

We lead the industry in software-defined networks, harnessing software to optimise performance and user experience. Our entire network is monitored and maintained in real-time through our industry-leading Q2 Software Platform™, proactively resolving issues and keeping our customers happy.

This is How We Do it

Control network end-to-end to assure quality

Partner with building owners and developers for sustainable solution

Offer value-add services to residents and occupants

VostroNet is already operating in buildings and campuses throughout Asia-Pacific

Let's Get Connected

1

Service Agreement

Sign an access agreement to commence

2

Owner Construction

A VostroNet Project Manager will survey your design plans to ensure that it meets VostroNet's specification

3

VostroNet Fibre Installation

We will connect the building to our network during the last phase of construction

4

Connection

Residents can connect to our network the moment they move in.
